

# COURSE OFFERINGS

## HONR 311.041 (Cross Listed with ENGL 301.01H) [3492]

### Fairy Tale Fictions

Ryan Habermeyer • MW 11 a.m.-12:15 p.m. • AC302

This seminar focuses on the composition of original fairy tales. Taking, to hear Vladimir Nabokov's claim, that "All great books are also fairy tales," we explore the rich traditional history and eclectic permutations of folk tale in world literature, in particular, the special role of fairy tale as a parable and deep history in the modern world, through the lens of color. There will be a brief fairy tale bootcamp at the beginning of the semester, with no prior fairy tale reading required. To begin our experiment, we'll read original, re-imagined, and newly written fairy tales from Italy, France, Germany, Russia and beyond, with close consideration of the adaptation and transformation of classic tales in contemporary popular fiction, and non-fiction. This course pairs with Dr. Baham's HONR 211 seminar, Campbell's Legend and Modernity. While jointly required, optional for both classes; highly recommended for those doing a reading and assignment are coordinated with Dr. Baham in order, to give the full range and depth of critical

## MATH 201.003H [3398]

### Calculus I

Michael Bardzell • MWF 1-1:50 p.m., HS113 • T 1-1:50 p.m. HS111

In this course, you will explore the concepts of limits, continuity, and differentiation, and their applications in calculus.

Meets General Education IVB or IVC. May not receive credit for both MATH 198 and MATH 201.

Prerequisite: C or better in MATH 140 or equivalent

## BIOL 101.051H

### Fundamentals of Biology

Christina Bradley • LAB: T 1-3:40 p.m., HS 250 • LEC: T 12:30-1:20 p.m., HS 109

Gain an understanding of the basic concepts and topics of biology, including the study of life, cell, genetics, ecology and evolution. Use case studies to explore concepts and analyze complex biological processes, personal and societal. The laboratory component focuses on a series of inquiry-based experiments and projects of a research project in environmental biology and biodiversity in our local environment.

Meets General Education IVA or IVB

## BIOL 215.011H & BIOL 215.010 [2283]

BIOL 215.011H & BIOL 215.010 [2283]

### Anatomy and Physiology I

Susanne Daly • LAB: TR 2-3:15 p.m., HS 253 • LEC: TR 12:30- 1:45 p.m., HS 253

Gain an understanding of the cell, tissues and organs, how they work together, and how they relate to the human body. Explore the structure and function of the human body, including the cell, tissues, organs, and systems. Explore the structure and function of the human body, including the cell, tissues, organs, and systems. Explore the structure and function of the human body, including the cell, tissues, organs, and systems.

Meets General Education IVA or IVB. Three hours lecture; three hours lab per week.

Recommended Prerequisites: BIOL 101 or 213.

## BUSINESS HONORS COURSE OFFERINGS

### INFO 211.111H [2429]

#### Information Systems Concepts for Management

Bill Burke • M 10-11:45 p.m. • (Hybrid) PH248

Designed for undergraduate business students, this course provides a comprehensive overview of information systems and their applications in management. You will explore the role of information systems in business, the types of information systems, and the challenges of managing information systems.
